

NV – NEVADA

ABSTRACT

Supporting and Advancing Nevada’s Dislocated Individuals (Project SANDI) will assist dislocated and underemployed workers by modernizing Nevada’s workforce system and expanding remote access to accelerated trainings for in-demand occupations using digital platform. It will modernize Nevada’s current workforce system by building a *Skills Decoder* that translates work experience into credentials, certificates, and degree programs to eventually automate the process. It will expand accelerated degree programs and trainings in Nevada’s priority sectors, i.e., health care, advanced manufacturing, IT, and the use of digital platforms to offer remote training for in-demand occupations. It will build an enhanced career navigation tool that integrates existing career guidance systems, case management interfaces, and online learning. It will also develop an online, self-paced entrepreneurship module that is embedded in training/degree programs in Nevada.

Key partners will include the Office of Workforce Innovation, Governor’s Office of Economic Development, Nevada System of Higher Education, College of Southern Nevada, Great Basin College, Truckee Meadows College, Western Nevada College Nevada State Library, Nevada Connections Development Board, Nevada Works Development Board, Nevada Department of Habilitation, Training & Department of Education, and Nevada Grow.
